

# 2022 Water Rate Study Report Indian Well Valley Water District Final Report January 4, 2023

January 4, 2023

Mr. Tyrell Staheli Finance Director Indian Wells Valley Water District 500 W. Ridgecrest Blvd. Ridgecrest, CA 93555

Re: 2022 Water Rate Study Report

Dear Mr. Staheli,

Hildebrand Consulting is pleased to present this 2022 Water Rate Study Report (Report) that was performed for Indian Wells Valley Water District. We appreciate the fine assistance provided by you and all of the members of the District staff who participated in the study.

If you or others at the District have any questions, please do not hesitate to contact me at:

mhildebrand@hildco.com (510) 316-0621

We appreciate the opportunity to be of service to the District and look forward to the possibility of doing so again in the near future.

Sincerely,

Mildiled

Mark Hildebrand Hildebrand Consulting, LLC

Enclosure

# **Section 1.** INTRODUCTION

Indian Wells Valley Water District (District) has retained Hildebrand Consulting to update its financial plan and conduct a cost-of-service analysis (COSA) to update the District's water rates (Study). This report describes in detail the assumptions, procedures, and results of the study, including conclusions and recommendations.

## **1.1 DISTRICT BACKGROUND**

The District was organized in 1953 for the purpose of providing domestic water supplies within its service area. The District is situated in the Indian Wells Valley, which lies in the northern portion of the Mojave Desert, southeasterly of the Sierra Nevada, and southerly of the Owens Valley. The District is the primary purveyor of public water supplies in the Ridgecrest area of Kern and San Bernardino Counties.

The District manages water resources and constructs, operates, maintains, repairs, and replaces water system facilities as needed to provide water service in compliance with applicable standards and regulations.

The District's water comes from groundwater wells, four of which are treated for arsenic removal. The service area varies in elevation by more than 500 feet; therefore, the District has created five different elevation zones for purposes of water rates.

#### **1.2 STUDY BACKGROUND**

The District prepared a water rate study in 2018 which included both a financial plan and COSA (2018 Rate Study<sup>1</sup>). Based on the 2018 Rate Study's recommendations the

<sup>&</sup>lt;sup>1</sup> Indian Wells Valley Water District, Water *Rate Study – Final Report*, November 29, 2018, Stantec

District adopted a five-year schedule of water rates with the last rate increase occurring on July 1, 2022.

## **1.3 STUDY OBJECTIVES**

The primary objectives of this Study are to:

- i. Develop a multi-year financial management plan that integrates the District's capital funding needs;
- ii. Identify future rate adjustments to water rates and a funding strategy that will ensure adequate revenues to meet the District's ongoing financial requirements;
- Determine the cost of providing water service to customers using industry accepted methodologies and to ensure compliance with Proposition 218 requirements; and
- iv. Recommend modifications to the existing rate structure, as needed, to address changes to the District's cost structure while promoting affordability and water conservation to the extent appropriate.

#### **1.4 STUDY METHODOLOGY**

This Study applied methodologies that are aligned with industry standard practices for rate setting as laid out in the American Water Works Association (AWWA) M1 Manual<sup>2</sup>, and applicable law, including California Constitution Article XIII D, Section 6(b), commonly known as Proposition 218.

The Study began with a review of the District's current financial dynamics and latest available data for the utility's operations. A multi-year financial management plan was then developed to determine the level of annual rate revenue required to cover projected annual operating expenses, debt service (including coverage targets), and

<sup>&</sup>lt;sup>2</sup> AWWA M1 Manual: Principles of Water Rates, Fees, and Charges, 7<sup>th</sup> Edition

capital cost requirements while maintaining adequate reserves. This portion of the Study was conducted using an MS Excel<sup>®</sup>-based financial planning model which was customized to reflect financial dynamics and latest available data for the District's operations in order to develop a long-term financial management plan, inclusive of projected annual revenue requirements and corresponding annual rate adjustments.

The 10-year Financial Plan was developed through several interactive work sessions with District staff. As a result of this process, the Study has produced a robust Financial Plan that will enable the District to meet its future revenue requirements and achieve financial performance objectives throughout the study period while striving to limit rate increases.

Using the revenue requirements for Fiscal Year<sup>3</sup> (FY) ending June 2023 (FY 2022/23), we then performed a detailed COSA using principles outlined by the AWWA and other generally accepted industry practices in order to develop rates that equitably reflect the cost of providing service.

The recommended rate schedules presented herein are designed to ensure that the District's water rates conform to accepted industry practice, legal requirements, and reflect the equitable distribution of system costs, while achieving the District's policy objectives, such as fiscal stability and affordability.

<sup>&</sup>lt;sup>3</sup> Fiscal years are indicated by their ending years. For example, FY 2023 starts on July 1, 2022 and ends on June 30, 2023.

# Section 2. 10-YEAR FINANCIAL PLAN

The financial plan is an annual cash flow model. As a cash flow model, it differs from standard accounting income statements, and balance sheets.

## 2.1 EXISTING FUNDS AND REVENUES

The following described the District's existing fund structures, policies and revenues.

#### 2.1.1 Reserve Policies

Utilities set aside cash reserves in order to both (1) ensure that short-term cash flow requirements can always be met even during adverse conditions and (2) meet financial obligations associated with outstanding debt. Reserves help to ensure that a utility will always have adequate funds available to meet its financial obligations (including debt payments) during periods of revenue shortfall (either because revenues are unusually low or because expenditures are unusually high). Reserves also provide a financial backstop in the event of emergency repairs to the system as a result of natural disasters or unanticipated system failures.

Establishing target reserve levels is central to the process of developing a multi-year financial plan. Financial policies should articulate the level of the reserve targets, the purpose of the respective reserves, and the intended use of the funds, including any limitations on the use of the funds. Once reserve targets are established, they should be reviewed annually during the budgeting process to assure conformance with any adopted policies and consistency with the underlying financial plan. Decisions can be made to maintain, increase, or spend down the reserve balances, as appropriate, within the context of the long-range financial plan.

The financial plan in this Study is consistent with all of the District's existing reserve policies. The District reserve policies are consistent with 1) our industry experience for

similar systems, 2) reserve policy recommendations by the AWWA, and 3) the criteria published by municipal utility rating agencies (Fitch, Moody's, and Standard & Poor's).

#### 2.1.1.1 MINIMUM RESERVES

Minimum reserves refer to reserves that the District should never *plan* to draw down (although circumstances may force the District to use these reserves). In other words, such reserves provide the District with a critical financial cushion that should only be used as a result of unforeseen circumstances. The District has one such reserve, which is described below.

**Operating Reserve** - The District has a 6-month Operating Reserve policy, which means that 180 days of operating costs are kept available in cash reserves. This reserve ensures continuity of service regardless of short-term changes in cash flow or sudden increases in operating costs. Since this reserve target is set relative to the District's operating budget, the target will change as the budget changes. As detailed in **Schedule 3**, the Operating Reserve target is approximately \$4.2 million in FY 2022/23.

#### 2.1.1.2 TARGET RESERVES

Target reserves are more flexible than minimum reserves and are designed to be drawn down and built back up over the course of a financial planning period. These reserves are meant to provide the District with both some protection against catastrophic failure as well as flexibility with cash funding its capital program.

**Capital Reserve** – The purpose of the Capital Reserve is both to (1) protect the District from the financial impacts that may be caused by the catastrophic failure of critical infrastructure and (2) manage the inherent volatility of capital spending. The District has sized the target of this reserve to be equal to the replacement cost of one well, one booster station and one storage tank. Based on District cost estimates, this equals approximately \$10.8 million.

**Vehicle and Computer Replacement Reserves** - These reserves total \$350 thousand and \$100 thousand, respectively. The vehicle and computer reserves are maintained at their maximum balance allowed by Resolution 13-08.

#### 2.1.2 Beginning Fund Balance

The ending cash balance for FY 2020/21 was used to establish the FY 2021/22 beginning balance, as outlined in **Table 1**. The restricted funds refer to funds that were collected through the Capital Facility Fee and are designated to pay for growth-related capital projects. The remaining Certificate of Participation (COP) proceeds are designated to pay for capital projects in both FY 2021/22 and FY 2022/23.

## Table 1: FY 2021/22 Beginning Cash Balance

Unrestricted Fund Balance	\$13,345,000
Restricted Fund (Capital Facility Fund)	\$1,230,000
Remaining 2018 COP Proceeds	\$6,376,000

Total: \$20,951,000

#### 2.1.3 Forecasted Customer Growth

Growth in the customer base affects both water demand as well as Capital Facility Fee<sup>4</sup> revenue. Estimated annual Capital Facility Fee revenues are based on the amount of new development activity (i.e., growth). Capital Facility Fee revenue accrues to the respective capital fund and is used to help fund planned capital improvement projects.

In recent years, Capital Facility Fee revenues indicate that the District has grown at a rate of about 0.3 percent per year. Future growth will depend on many factors, including

<sup>&</sup>lt;sup>4</sup> Capital Facility Fees are one-time charges to new development to pay for capacity in the utility systems.

the economy. Based on direction from District staff, this Study assumes that the annual growth rate will continue at an average of 0.3 percent for the planning period.

#### 2.1.4 Rate Revenue

Rate revenue is the revenue generated from customers for water service. The District receives rate revenue in the form of fixed charges (Account Charge, Ready-to-Serve Charge and Arsenic Compliance Charge) and the consumption-based Commodity Charge and Zone Charge. The District also collects Construction Meter Charges for the use of temporary hydrant meters, a fixed Private Fire Service charge for those with direct fire service lines, and Bulk Water Rates for customers that receive their water from the filling station. Rate revenue is based upon FY 2021/22 budgeted revenues, adjusted annually to reflect assumed customer growth and the rate revenue adjustments that are proposed by this Study.

The Financial Plan starts with FY 2021/22 budgeted rate revenues. Estimated future rate revenues include the small amount of customer growth (see Section 2.1.3) as well as the annual rate revenue adjustments proposed by this Study. Other than demand increases associated with customer growth, water demand is anticipated to remain constant. Budgeted and projected rate revenues (including proposed rate adjustments) over the next ten years are listed in **Schedule 3**.

#### 2.1.5 Non-Rate Revenues

In addition to rate revenue, the District receives additional "non-rate revenue" from sources such as miscellaneous service fees (e.g., turn-on service fee, delinquency billing charges, plan checks and inspection fees), Capital Facility Fees, operational revenue (e.g., energy curtailment credit and rent), Groundwater Sustainability Agency (GSA) fee revenue (see below) and interest revenue on investments. Projections of non-rate revenues were based on FY 2021/22 budgeted revenues and assumed to remain flat for the planning period. Future interest income was estimated based upon projected fund

balances and assumed interest rate of 0.5 percent, which is consistent with the District's historical interest earnings relative to its total reserve levels.

The District is subject to fees imposed by the Indian Wells Valley Groundwater Authority are designed to pay for the costs associated with complying with the requirements of the Sustainable Groundwater Management Act (SGMA). The District currently pays two such fees, both of which are volumetric fees and are collectively referred to as the "GSA fees." The first is the Groundwater Extraction Fee of \$0.24 per hundred cubic feet (HCF) of pumped groundwater to primarily pay for the preparation of the Groundwater Sustainability Plan (GSP). The second is the Replenishment Fee of \$1.65 / HCF of pumped groundwater to pay for the costs of an imported water supply. Currently the District passes through these GSA fees to customers by adding the above commodity rates to the District's then-current commodity rates.

Estimated future annual Capital Facility Fee revenues were based on the current fees and the projected amount of new growth (see Section 2.1.3). Capital Facility Fee revenue is restricted and is used to help fund specific growth-related capital improvement projects.

Budgeted water rate and non-rate revenues are depicted in Figure 1 and listed in detail in **Schedule 3**.

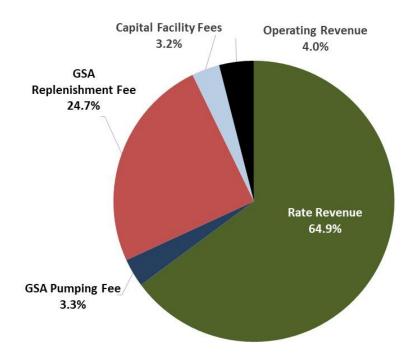

Figure 1: Revenue Categories (FY 2021/22 budget)

### 2.2 CURRENT AND FORECASTED EXPENSES

This section describes the District's existing and forecasted operating, debt and capital expenses.

#### 2.2.1 Operations and Maintenance

The District's operating and maintenance expenses were projected over the next ten years based on expected inflation rates, starting with the budgeted expenses for FY 2021/22 (see Section 2.2.2). Major budgeted expense categories for FY 2021/22 are depicted in Figure 2. Budgeted and projected operating and maintenance costs are listed in detail in **Schedule 1**.

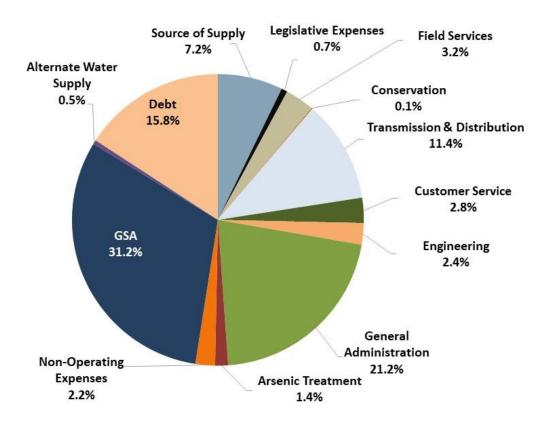

Figure 2: Budgeted Operating & Debt Expenses (FY 2021/22)

#### 2.2.2 Cost Escalation Projections

Annual cost escalation factors for the various types of expenses were developed based upon a review of historical inflation trends, published inflation forecasts, industry experience, and discussions with District staff. During the projection period, most operating expenses are projected to increase at 3.0 percent per year, which exception of salaries which are projected to increase by 8.0 percent<sup>5</sup> during FY 2022/23 and FY 2023/24 followed by 5.0 percent per year and utilities which are projected to increase by 10 percent in FY 2022/23 followed by 3.0 percent thereafter.

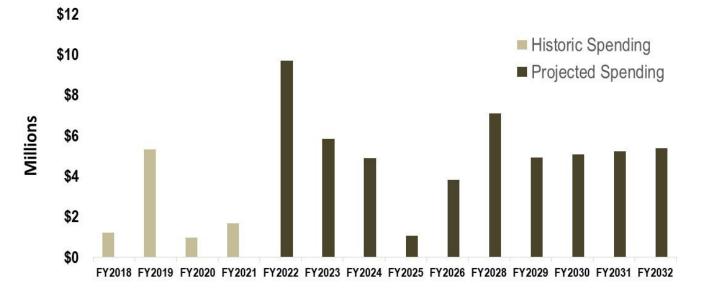

#### 2.2.3 Existing Debt

The District currently pays debt service on two outstanding loans. This includes a 2018 Water Revenue COP (with annual debt service of approximately \$1.9 million through FY 2038/39 followed by approximately \$800 thousand for ten more years) and a 2016 Solar Loan (with annual debt service of just over \$500 thousand through FY 2034/35).

#### 2.2.4 Capital Improvement Program

Figure 3 shows that from FY 2017/18 through FY 2020/21 the District has spent an average of approximately \$2.3 million per year on capital projects to rehabilitate or improve the water system. During the period from FY 2021/22 through FY 2031/32 the District plans to increase its annual capital spending to an average of \$5.3 million per year in order to pro-actively address the water system's rehabilitation needs associated with supply facilities, pipes, water tanks, and other system facilities.

<sup>&</sup>lt;sup>5</sup> Salary escalations based on the District's Memorandum of Understanding with staff.

#### Figure 3: Historic and Projected Capital Spending

Some of the District's more significant projects are highlighted in Table 2. The District plans to replace the Ridgecrest Height and Gateway booster stations (at a combined cost of approximately \$4.0 million in current dollars), build three new water tanks (at a combined cost of approximately \$5.5 million in current dollars), and four major transmission line projects (Springer, Gateway, Bowman, and La Mirage) for a combined cost of \$16.8 million in current dollars. A detailed list of the planned capital projects and associated costs through FY2028/29 is provided in **Schedule 2**. Starting in FY2029/30 the capital spending is assumed to be the same as the average capital spending from the previous eight years (about \$4.0 million in 2022 dollars).

\* All costs expressed in 2022 dollars

## 2.3 PROPOSED FINANCIAL STRATEGY

The above information was entered into a financial planning model to produce a 10year projection of the sufficiency of current rate revenues to meet projected financial requirements and determine the level of rate revenue increases necessary in each year of the projection period. This section first explains the District's debt strategy, then describes the proposed rate increases for the next 5 years.

#### 2.3.1 Debt Strategy

In 2018 the District issued \$28.6 million in debt through a Water COP. The proceeds from the 2018 COP debt have funded a majority of the District's capital spending needs since that time. As of July 1, 2021, the District had a balance of \$6.3 million remaining of the debt proceeds, which is expected to fund a majority of capital spending in FY 2021/22 and partially fund the capital spending in FY 2022/23.

As a result of the above, the District's cash reserves are currently higher than was projected by the 2018 Rate Study, which had anticipated a cash reserve level of about

\$6.5 million in FY 2021/22 as compared to the actual reserve levels of about \$20.0 million (see Section 2.1.2).

The Board has directed District Staff to mitigate the cost of the forecasted spike in capital spending with a new debt issue. As such, the capital plan calls for a debt issue of \$8.2 million<sup>6</sup> FY 2024 to pay for the Ridgecrest Heights Booster Station, Springer 24" transmission line, and the Gateway Blvd. 24" transmission line projects (see Table 2). While the District will attempt to obtain a (lower cost) State Revolving Fund loan, this Study assumes that the debt will be a bond with a 4.3 percent interest rate for a 30-year period, including a 1 percent issuance cost and a 1-year debt service reserve requirement.

#### 2.3.2 Debt Coverage Requirements

One of the requirements associated with debt is to maintain rate revenue and other non-rate revenues at levels sufficient to meet debt service coverage requirements (DCR). The District's current debt contracts require that the District maintain net revenues (i.e., revenues after paying all operating costs) at a DCR level that is at least 1.20 times annual debt service. Based on published guidance from Fitch Ratings, utility systems with *midrange* financial profiles should maintain a DCR greater than 1.50 times annual debt service. **Schedule 3** shows that the proposed financial plan maintains a DCR of at least 1.44 (and usually higher).

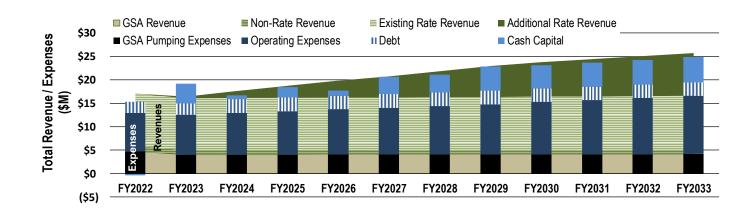

#### 2.3.3 Proposed Rate Increases

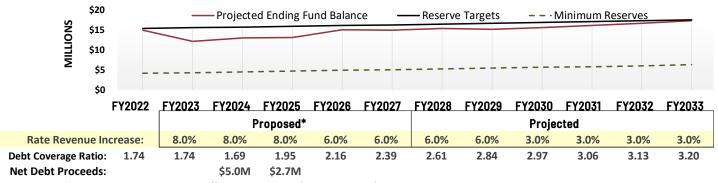

Based upon the previously discussed financial data, assumptions, policies, and debt strategy, this Study proposes a five-year schedule of annual rate adjustments and debt funded capital spending as shown in **Figure 4**. The rate schedules associated with these rate adjustments (as well as the rate structure adjustments to be discussed in Section 3) have been provided as **Schedule 5**.

<sup>&</sup>lt;sup>6</sup> This includes the cost of the reserve requirement and the assumed 1 percent cost of issuance.

The first proposed rate increase for this Study is scheduled to occur March 1, 2023 (eight months into the fiscal year). All subsequent rate increases proposed by this Study will occur on January 1 of each year (halfway through the fiscal year).

The numbers provided in Schedule 3 are summarized graphically in Figure 4, which shows the District's target reserves being met through-out the planning period. After the final recommended increase in FY 2026/27, it is anticipated (barring unforeseen emergencies or changes in infrastructure/operational needs) that the annual rate revenue increases will taper (but still continue) as shown in Schedule 3. These levelized rate increases will allow the District to transition to a pay-as-you-go (PayGo) financing model for its capital program, rather than continuing to debt finance capital spending.

\* Propose rate increases to be effective January 1 of the respective fiscal year

Figure 4: Cash Flow Projection with Recommended Rate Revenue Increases

# **Section 3.** COST OF SERVICE ANALYSIS AND RATE DESIGN

The purpose of a COSA and rate design is to determine the cost of providing water service to the District's customers and structure the rates so that revenue is equitably recovered from individual customers. This Study employed well-established industry practices for these types of studies as recognized by the AWWA and other accepted industry practices. The focus of this analysis was to meet the following objectives:

- Fairly and equitably recover costs through rates;
- Conform to accepted industry practice and legal requirements;
- Provide fiscal stability; and
- Promote water conservation and affordability where appropriate.

#### 3.1 CURRENT RATES

The District's current rate structure is comprised of fixed service charges and a commodity (consumption-based) rate. The District's current fixed service charge is made up of an Account Charge, a Ready-to-Serve Charge and an Arsenic Treatment Charge. These charges are assessed based on meter size and currently recover about 62 percent of rate revenue, which covers a portion of the District's fixed costs.

The Commodity Rates are designed to recover the remainder of the District's fixed costs as well as all of its variable costs. The Commodity Rates currently have four tiers and have tier water allocation based on the water needs of single family residential homes. Other accounts receive water allocations in proportion to their meter size. The monthly tier allocations for single family homes (and the smallest meter size of <sup>3</sup>/<sub>4</sub>") are 9 HCF of Tier 1 water, 15 HCF of Tier 2 water, and 21 HCF of Tier 3 water (Tier 4 water usage is unlimited). In addition, a Zone Charge is added to the Commodity Rates for those customers that require that water be delivered to higher elevations (see Section 3.4). In addition to water rates, the District charges other miscellaneous rates including bulk water accounts, private fire protection charges, and

construction meter charges (see Section 3.4), in addition to passing through the cost of the GSA to customers.

## 3.2 COSA AND RATE DESIGN METHODOLOGY

The cost-of-service methodology employed by this Study is based on the "commoditydemand" method promulgated in AWWA's Manual M1: Principles of Water Rates, Fees, and Charges (M1), whereby costs (see Step 1 in Figure 5) are first allocated to individual functions (see Step 2), and the costs associated with each function is recovered through an appropriate rate (see Step 3).

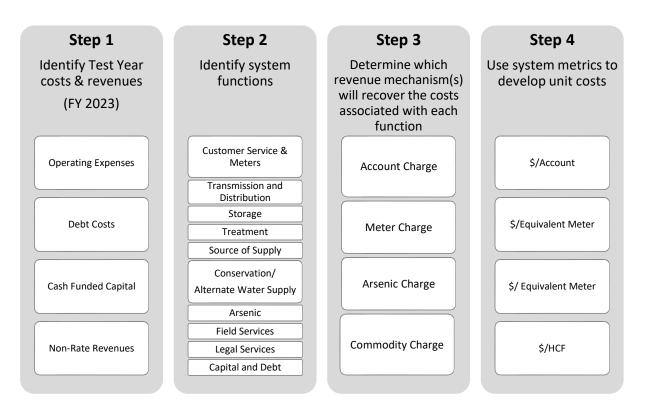

Figure 5: Cost of Service and Rate Design Methodology Steps

The following sub-sections give a detailed description of each step and the results.

#### 3.2.1 Step 1: Identify Test Year Costs and Non-Rate Revenues

The District's various costs (including operating expenses and debt service) and revenues come from the District's FY 2022/23 annualized expenditure and revenue requirements per this Study's financial plan. The capital spending value is based on a five-year average in order to mitigate against any anomalous values in the Test Year. Non-rate revenues and use of reserves are both credited against expenses since both reduce the need for rate revenue.

#### 3.2.2 Step 2 and Step 3: Identify System Functions and Associated Revenue Recovery

Each line-item expense and revenue from Step 1 is assigned to one of ten systems functions (see Step 2 in Figure 5). A detailed list of how each line-item expense and revenue was assigned is provided as Schedule 4.

The cost associated with each of the ten functions is then determined to be recovered through a specific rate revenue component (either the account charge, the meter charge, the commodity charge or the arsenic charge). The assignment of function costs to revenue recovery components is presented in Table 3.

Functions	4c <sub>count</sub> Charge	M <sub>efer Charge</sub>	Commodity	Arsenic
Customer Service & Meters	50%	50%		
Transmission and Distribution		50%	50%	
Storage		50%	50%	
Treatment			100%	
Source of Supply			100%	
Conservation / Alternate Water Supply			100%	
Arsenic				100%
Field Services	50%	50%		
Legal Services			100%	
Capital and Debt (based on Asset Register)	5.2%	50.5%	16.8%	27.5%

Table 3: Allocation of Function Costs to Revenue Recovery Components

Generally speaking, functions that are made up of predominantly fixed costs are recovered through fixed charges. For example, Customer Service and Meter costs do not vary with

changes in water sales (i.e., the costs are fixed) and are therefore recovered through the account charge and meter charge. Conversely, functions with variable costs are recovered through the variable charges. Conversely, the Source of Supply function is recovered entirely through the commodity charge.

While all variable costs are recovered through the commodity charge, not all fixed costs are recovered through the fixed charges. There are some fixed costs that are recovered through the commodity charge because the vast majority of the District's costs are fixed; and it is reasonable to recover some of those fixed costs through a variable revenue.

The percentages in the Capital Asset function in in Table 3 are based on the net value of existing assets.

The detailed summary of all cost allocations to revenue recovery components is presented in Schedule 4. Some of the line item in Schedule 4 have an allocation basis of "Indirect Operations." These are general costs that do not fall under any of the specific categories listed in Table 3, therefore the "indirect allocation" method is used to allocate those cost based on relative allocation of all other operating costs (i.e., based on the allocation results up until that point). Further, starting on Row 196 of Schedule 4, the District's non-rate revenue sources are "credited" to each revenue recovery component based on the indirect allocation method for all costs.

#### 3.2.3 Step 4: Use System Metrics to Develop Unit Costs

After District's costs are allocated to revenue recovery components, those costs are then converted to a unit cost of service based on the appropriate system metrics, as shown in Table 4. For example, the revenue requirement for the account charge is approximately \$1.0 million and there are 12,016 current accounts, therefore the charge per account is \$83.23 / year or \$6.94 / month. The revenue requirements for the meter charge and the arsenic charge are divided by the total number of current equivalent meters (see explanation of equivalent meters in text box below). Finally, the commodity rate is calculated by dividing the revenue requirement by all of the District's water sales.

	Account Charge	Meter Charge	Arsenic	Commodity
Units of Service:	12,016	13,649	13,649	2,430,117
	Accounts	Equivalent Meters	Equivalent Meters	All Water Sales
Revenue Requirement	\$1,017,700	\$4,634,700	\$1,683,800	\$4,475,200
Unit Costs:	\$84.70	\$339.57	\$123.37	\$1.84
	per Account per	per equivalent meter per	per equivalent meter	per HCF
	year	year	per year	
	\$7.06	\$28.30	\$10.28	
	per Account per	per equivalent meter per	per equivalent meter	
	month	month	per month	

## Table 4: Calculating Unit Cost of Service

#### **EXPLAINING METER EQUIVALENCY**

The meter equivalency metric is an industry-standard factor used to represent the proportional demand that different sized meters place on the system based on the design capacity necessary to serve it. A meter equivalency schedule allows us to express all meter sizes in terms of multiples of the lowest common denominator (in this case the smallest meter is <sup>3</sup>/<sub>4</sub>"). The meter equivalency schedule used by this Study is shown in the table below and remains the same as historical District practice.

Mater Fruit alonaioa

Meter			Meter Equivalence
Size	Meter Type	GPM	(a)
3/4"	Displacement	30	1.00
1"	Displacement	50	1.67
1 1/2"	Displacement	100	3.33
2"	Displacement	160	5.33
3"	Compound	320	10.67
4"	Compound	500	16.67
6"	Compound	1,000	33.33
8"	Compound	1,600	53.33
10"	Compound	2,300	76.66

### 3.3 PROPOSED RATE STRUCTURE

Some of the District's costs have fundamentally changed since the last rate study, therefore this Study recommends a modification to the tiered rate structure to reflect these changes. No structural changes are recommended for the fixed charges. These recommendations are detailed below.

#### 3.3.1 Proposed Fixed Rates

The Study recommends that the District's fixed charges continue to be based on a fixed account charge (assessed to each account), a fixed meter charge (assessed based on meter size), and an arsenic charge (also assessed based on meter size). Together the account charge and meter charge make the Ready-to-Serve Charge. The account charge would be \$6.94 / month in Year 1 (see Table 4) while the meter charge and arsenic charge on the meter size, as summarized in Table 5.

Fixed Rates (per month)					
Meter Size	Ready-to- Serve	Arsenic Charge			
3/4"	\$35.36	\$10.28			
1"	\$54.23	\$17.13			
1 1/2"	\$101.39	\$34.27			
2"	\$157.99	\$54.83			
3"	\$308.93	\$109.65			
4"	\$478.73	\$171.33			
6"	\$950.39	\$342.67			
8"	\$1,516.39	\$548.27			
10"	\$2,176.73	\$788.13			

Table 5: Year 1 Meter Charge and Arsenic Charge by Meter Size

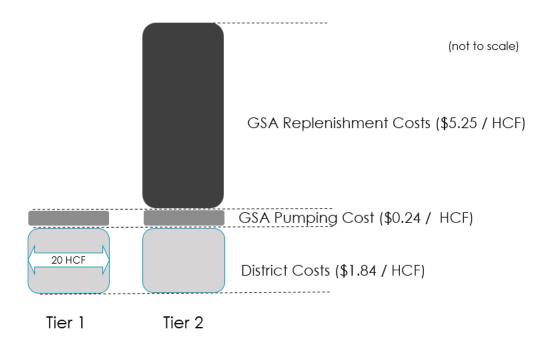

These proposed fixed rates will result in just over 61 percent fixed rate revenue, which is very similar to the current fixed revenue percentage (the actual percentage will depend on actual water sales).

#### 3.3.2 Tiered Commodity Rates

The proposed tiered rate structure will have two tiers (instead of four tiers). Tier 1 will recover the District's "commodity" function costs (approximately \$4.4 million, see Row 202 of Schedule 4) and the pass-through of GSA's Groundwater Extraction Fee (currently \$0.24 / HCF). Tier 2 will recover both Tier 1 costs as well as pass-through the GSA Replenishment Fee (currently \$1.65 / HCF). This concept is shown graphically in Figure 6 with rates that would be in effect during Year 1.

Previously the tier water allocations were based on customer water needs (e.g., the Tier 1 allocation for single family homes was based on indoor water needs). In contrast, the proposed revised methodology would size the Tier 1 allocation based on the District's GSA groundwater pumping allocation. Currently the GSA allows the District to pump 4,390 AF before the Replenishment Fee (currently \$2,130 / AF) is imposed. The Tier 1 allocation to District customers is therefore proposed to be designed to allow each customer to use their proportionate share of the water allocation before being charged the pass-through Replenishment Fee. In keeping with current practices, water allocations will continue to be sized in proportion to meter sizes. Based on current water usage (as well as accounting for approximately 8.1 percent water losses between the wells and the end users) an allocation of 20 HCF per equivalent meters results in Tier 1 water sales of 4,050 AF (or 4,377 after adding the 8.1 percent water losses, which is nearly identical to the groundwater pumping allocation mentioned above). As such, the Tier 1 allocation is proposed to be 20 HCF per equivalent meter (per month), with all water usage above the allocation being charged the Tier 2 rate (to pay for the GSA Replenishment Fee). Again, this concept is shown graphically in Figure 6 with rates that would be in effect during Year 1.

This Study assumes that the GSA fees and water allocation will remain the same over the next five years. As such, the GSA portion of the commodity rates remains the same in the proposed 5-year rate schedule (see Schedule 5). The portion of the commodity rates designed to recover District costs will increase by the percentage of the proposed annual rate adjustments.

## Figure 6: Year 1 Tiered Rates and Tier Allocation

The proposed tier thresholds by meter size are summarized in Table 6.

	Tier 1 Threshold
Meter Size	(HCF per month)
3/4"	20
1"	33
1.5"	65
2"	104
3"	208
4"	325
6"	650
8"	1040

## Table 6: Proposed Tier Thresholds By Meter Size

See **Schedule 5** for a complete schedule of Ready-to Serve, Arsenic, and Commodity Rates over the next 5 years.

## 3.4 MISCELLANEOUS CHARGES

In addition to the fixed and commodity rates described above, the District charges additional rate and non-rate fees that are addressed below.

## 3.4.1 Zone Charge

The District currently charges a Zone Charge (elsewhere sometimes known as an elevation charge or pumping charge) to account for the cost to "lift" water to properties that are located in higher elevations. The District has five zones (Zone A through Zone E), which differ in elevation by approximately 100 ft. The methodology in calculating the Zone Charges in the 2018 Rate Study remains applicable, therefore the existing Zone Charges will only increase in proportion to the overall rate revenue increases described in Section 2.3.3. See Schedule 5 for a complete schedule of Zone Charges for the five-year planning period.

#### 3.4.2 Bulk Water Rates

The District currently provides Bulk Water services for a metered rate to customers who receive the water at the District's bulk water facility. Individually subscribed customers pay a fixed monthly charge in addition to a uniform commodity rate for water actually used. The methodology in calculating the Bulk Water Rates in the 2018 Rate Study remains reasonable, therefore the existing rate will only increase in proportion to the overall rate revenue increases described in Section 2.3.3. See Schedule 5 for a complete schedule of Bulk Water Rates for the five-year planning period.

#### 3.4.3 Construction Meter Rates

The District provides the service of issuing temporary meters ("Construction Meters"). The methodology in calculating the monthly meter charges for the Construction Meter rates in the 2018 Rate Study remains reasonable, therefore that portion of the existing Construction Meter rates will only increase in proportion to the overall rate revenue increases described in Section 2.3.3. The volumetric portion of the Construction Meter Rates will be set equal to Tier 2 Commodity rates going forward. See Schedule 5 for a complete schedule of Construction Meter rates for the five-year planning period.

#### 3.4.4 Private Fire Rates

Private Fire rates apply to accounts that have a dedicated service line for fire protection. The methodology in calculating the Private Fire rates in the 2018 Rate Study remains reasonable, therefore the existing rates will only increase in proportion to the overall rate revenue increases described in Section 2.3.3. See Schedule 5 for a complete schedule of Private Fire rates for the five-year planning period.

# Section 4. CONCLUSION

This Study used methodologies that are aligned with industry standard practices for rate setting as promulgated by AWWA and all applicable law, including Proposition 218. The proposed adjustments to the rates will provide revenue stability and continue to equitably and proportionately recover costs from the appropriate customers.

Based on the methodologies described above, Schedule 5 provides a complete schedule proposed rates over the five-year planning period. The water rates will need to be adopted in accordance with Proposition 218, which will require a detailed notice describing the proposed rates to be mailed to each affected property owner or customer at least 45 days prior to conducting a public hearing to adopt the rates.

It is recommended that the District continue to closely monitor its financial condition on an annual basis.

## SCHEDULES

- Schedule 1: Budgeted and Projected Operating and Debt Expenses
- Schedule 2: Capital Spending Forecast
- Schedule 3: Cash Flow Pro Forma
- Schedule 4: Allocation of Costs to System Functions
- Schedule 5: Five-Year Schedule of Proposed Water Rates
